Sematext Cloud   Sematext Enterprise

ON-PREM LOGGING AND INFRASTRUCTURE OBSERVABILITY

Enterprise Log Management & Infrastructure Monitoring

For agile devops running dynamic infrastructure
Metrics, Traces, Logs, Alerts, and Events in one
Stop painful troubleshooting using multiple tools
Find root causes of issues faster and with less effort

Request Demo

Like Sematext Cloud…

…but running on your own infrastructure

While Sematext Cloud is a fully managed SaaS, Sematext Enterprise is all yours to download and run. Other than that, they are exactly the same, offering infrastructure monitoring (including container monitoring), application monitoring, log management, alerting, real user monitoring, etc.

Why Sematext Enterprise?

In short, because using multiple vendors' siloed solutions for APM, log management, infrastructure monitoring, and real user monitoring is painful for people using them – think context-switching, and it's painful for the wallet

sematext

monitoring, etc. at your fingertips and lets you seamlessly analyze and correlate them. When all operational data are together troubleshooting is simpler, downtimes are shorter, recovery is faster, and revenue loss is minimized.

Hassle-free Log Management

Get Started

Your fully managed ELK Stack in the Cloud or on-premise

The combination of the Elasticsearch API and a fully integrated Kibana gives you the power of the ELK stack while relieving you of management hassles and high expert staff costs.

Ship and visualize logs: The way you want

Use any data shipper you like and access data via integrated Kibana, Sematext Cloud UI, or your own Kibana, Grafana, Apache Zeppelin.

interest. Yes, like "tail -f | grep".

Easily locate errors that broke your app

Locate the log message with the error that broke your app. Then use Log Event Content to see what happened before and after.

Need an In-house Troubleshooting Solution?

Contact us to discuss your needs. Sematext Enterprise team will help you assess your on premise requirements.
